

## Steps to Configure and Verify DHCP Server in Cisco Packet Tracer:

**Step 1:** First, open the cisco packet tracer desktop and select the devices given below:

S.NO	Device	Model-Name	Unit
1.	PC	PC	5
2.	Switch	PT-Switch	2
3.	Router	PT-Router	1
4.	Server	Server-PT	1

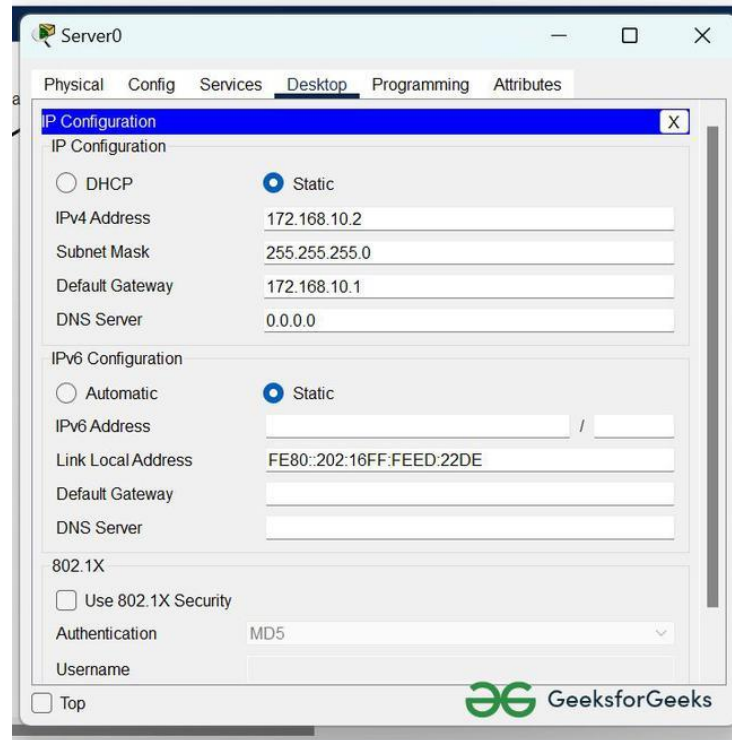

- Now create a network topology as shown below the image.
- Use an Automatic connecting cable to connect the devices with others.

**Step 2:** Configure the Server with IPv4 address and Subnet Mask according to the Data given above.

- To assign an IP address in Server, click on Server-PT.
- Then, go to desktop and IP configuration and there you will find IPv4 configuration.
- Add IPv4 address, subnet mask, and Default Gateway.

Parameters	Address value
IPv4 Address	172.168.10.2
Subnet Mask	255.255.255.0
Default-Gateway	172.168.10.1

***Ignore the option below if you have completed the configuration above.***

**Option 2.** Assigning IP address using the ipconfig command.

- We can also assign an IP address with the help of a command.
- Go to the command prompt of the server
- Then, type ipconfig <IPv4 address><subnet mask><default gateway>(if needed)

example: ipconfig 172.168.10.2 255.255.255.0 172.168.10.1

### Step 3: Configuring the DHCP server.

To configure the DHCP server first,

- Click on Server then, Go to services.
- Click on DHCP and turn on the services and configure the DHCP server with the help of the data given below.
  - Delete the default values of Start IP Address and subnet Mask then save the info.
  - Create two new pools.

POOL1 and POOL2 and fill in the data as shown in the images below.

Server0

**Step 4: Configuring Router with IPv4 Address and Subnet Mask.**

**IP Addressing Table for Router:**

S.NO	Device	Interface	IPv4 Address	Subnet Mask
1.	router0	FastEthernet0/0	172.168.10.1	255.255.255.0
		FastEthernet0/1	192.168.10.1	255.255.255.0

- To assign an IP address in router0, click on router0.
- Then, go to config and then Interfaces, and make sure to turn on the ports.
- Then, configure the IP address in FastEthernet according to IP addressing Table.
- Fill IPv4 address and subnet mask.

**Step 5: Configuring the PCs and changing the IP configuration.**

- To assign an IP address in PC0, click on PC0.
- Then, go to desktop and IP configuration and there you will find IPv4 configuration.
- Change its state from static to DHCP.
- It will automatically fetch the data and configure itself.

- Repeat the same procedure with other PCs to configure them thoroughly.
